PROFILE

Software Engineering undergraduate at LNBTI seeking a software engineering internship. Have independently designed and shipped 8 applications spanning full-stack web (Laravel, .NET, React) and desktop (Java Swing, C++), covering relational schema design, MVC/DAO architecture and responsive front-end work. Studying Japanese toward JLPT N4 with the goal of working in the Japanese IT industry.

EDUCATION

BSc (Hons) Software Engineering2024 - 2027

Lanka Nippon BizTech Institute (LNBTI) · Sri Lanka

Relevant coursework: Programming Fundamentals, Object-Oriented Modelling & Development, Data Structures & Algorithms, Database Systems, Advanced Database Systems, Web Programming, Technologies for Web Development, Visual Application Programming, Software Architecture & Design, Requirement Engineering, Project Management, Internetworking

TECHNICAL SKILLS

Languages

JavaC#PHPC++JavaScriptTypeScriptSQL

Frontend

React.jsNext.jsTailwind CSSBootstrap 5HTML5CSS3

Backend

LaravelASP.NET (C#)Java Swing / JDBC

Data

MySQLSQL ServerSQLiteEntity Framework

Practices

OOPMVC & DAOREST APIGit / GitHub

Languages

Sinhala — nativeEnglish — Professional working proficiencyJapanese — JLPT N4 (studying)

PROJECTS

Café Elixir — Restaurant Management SystemLaravel 11 · Bootstrap 5 · MySQL

- Built a full coffee-shop platform covering online ordering, table reservations and a multi-tier customer loyalty program.
- Designed the relational schema and implemented ordering, reservation and loyalty-tier logic within Laravel's MVC structure.
- github.com/avinduoshan1/coffeeshop-official

TicketMasterPro — Cinema Booking System.NET · C# · Entity Framework · SQL Server

- Developed an interactive visual seat-selection interface with real-time price calculation and live booking-status tracking.
- Built an admin dashboard for managing screenings and reservations, with data access layered through Entity Framework over SQL Server.
- github.com/avinduoshan1/TicketMasterPro

PasalMalla — Bilingual E-Commerce PlatformLaravel 12 · Tailwind CSS · SQLite

- Built a Sinhala/English school-supplies store with a custom shopping cart, product catalogue and admin dashboard.
- Integrated a WhatsApp-based order flow so small sellers can accept orders without a payment-gateway account.
- github.com/avinduoshan1/Pasal\_Malla

Café Elixir POS — Desktop Point-of-Sale ApplicationJava 23 · Swing · JDBC

- Structured the application in MVC with a separate DAO layer, isolating UI, business logic and database access for testability.
- Implemented dynamic tax calculation and BLOB-based product image storage retrieved through JDBC.
- github.com/avinduoshan1/cafe

NewsAPI ExplorerReact.js · TypeScript · Vite

- Built a real-time global news search client with advanced filtering, multi-language support and a responsive dark UI.
- github.com/avinduoshan1/NewsApi

Also built: PawCare - responsive pet-services site with animated gallery filtering (HTML5, CSS3, Vanilla JS, live demo) | Gadget Galaxy - role-based inventory desktop app using Java OOP and File I/O | Hotel Management System - C++ console application demonstrating polymorphism and dynamic memory management.
